The Future of Commercial Cleaning is Hybrid

Cleaner and robot is better than cleaner or robot. Combining the expertise of professional cleaners with advanced robotic technology to deliver a smarter, more productive and cost-effective cleaning solution.

Hybrid Robotic Human Cleaning

Realcorp Commercial Cleaning is introducing an innovative hybrid cleaning service that combines the strengths of professional cleaners with autonomous cleaning robots.

Rather than replacing cleaners, our approach uses robotics to amplify human productivity. Robots autonomously handle straightforward, time-consuming cleaning tasks, freeing up our people to focus on the areas that require their expertise and attention to detail.

Why Go Hybrid?

Let robots do what robots do best

Robots handle repetitive, time-consuming tasks such as vacuuming and mopping, while professional cleaners focus on bathrooms, kitchens, amenities, glass, touchpoints and detailed cleaning that requires a human touch.

A higher standard of clean, more often

By automating routine floor cleaning, we can significantly increase cleaning coverage and frequency. Imagine moving from vacuuming just a few times per week to comprehensive daily floor cleaning, without increasing your overall cleaning hours.

Greater efficiency. Potential cost savings.

Combining human expertise with robotic productivity creates opportunities to reduce labour requirements, improve cleaning outcomes and potentially lower operating costs, without compromising service quality.

Future-proof your cleaning operations

With potential tightening of immigration settings and increasing pressure on labour availability, robotics can help safeguard your facility against future workforce constraints by delivering greater cleaning output with fewer labour hours.

Powered by Industry Experience and Technology

Realcorp has partnered with Robot Specialist, combining decades of cleaning industry experience from a team with roots at Godfreys with state-of-the-art commercial robotic technology.

Realcorp is working exclusively with Robot Specialist to introduce and roll out this innovative hybrid cleaning solution.

Robot Specialist will work alongside Realcorp to manage the onboarding, site mapping and deployment of robotic equipment, including lift integration where supported by the lift provider's API. Ongoing robotic maintenance, technical support and troubleshooting will also be included.

One integrated cleaning solution, one contract, and one point of accountability.

Is Your Facility Suitable?

Our hybrid solution is ideally suited to buildings and businesses requiring at least four hours of cleaning per shift, where robotics can deliver meaningful improvements in productivity, cleaning coverage and cost efficiency.

Running a tender or supplier prequalification? See our commercial cleaning procurement and tender capability .

Let's Explore What's Possible

Every building is different. We'd welcome the opportunity to explore how a tailored combination of professional cleaners and autonomous robots could improve cleaning outcomes, increase efficiency and deliver greater value for your facility.

Contact Realcorp Commercial Cleaning to discover what hybrid cleaning could achieve for your building or business.
